iEPB project aim is to upgrade the energy performance of the EU's building stock by increasing the synchrony between multiple EPB assessments with a user-friendly approach to help stakeholders at all levels to obtain accurate data and better energy-optimized buildings.

For the identity system we took inspiration from these core ideas:

- The aggregation of different data sets
- User-friendliness and practicality
- Synchronicity and transition to a greener economy

Visual concepts such as **aggregation** and **transition** were also taken into consideration in the development of the visual identity.

These concepts are conveyed through the use of gradients colours and circular shapes. The scale also represents the grading scale for building's energy performance.
